

Bader & Sons Co.
JDLINK™
Information & Setup

Your Machine is equipped with JDLINK™ Now you can easily see what equipment is running and which machines are idling – all while keeping preventative-maintenance tabs on your machines

With JDLINK™, you can:

- Monitor machine health
- Extend life through preventative maintenance
- Simplify maintenance scheduling and documentation
- Increase uptime through alerts of potential downtime
- Document machine and operator productivity
- Recover stolen machines through GPS tracking
- Wireless Data Transfer (coming soon)

JDLINK™ works by combining a controller (MTG) that includes cellular communication and GPS antennas. Machine data is collected by the controller and wirelessly transferred to a data server, where it's made available via the JDLINK™ website.

JDLINK Ultimate

Provides 24/7/365 machine hour, location and maintenance tracking. You can set the allowable operating times and days using the curfew feature. Easily draw a geofence around a machine so you can be alerted should the machine travel outside its virtual boundary. It provides a comprehensive view of engine diagnostics, and adds monitoring of fuel consumption, gear selection, component pressure and temperature, and full-featured diagnostic-information retrieval. JDLINK Ultimate monitors service status and advises of scheduled maintenance.

Stay Connected On-the-go

When you download the free JDLINK™ mobile app for your Droid, iPhone or iPad, monitoring and managing your machines from outside the office is easy. If you already have a JDLINK™ account, simply log in and check your machines.

Currently **Bader & Sons Co.** receives JDLINK™ alerts from your equipment to help prepare for any general maintenance needs or potential problems.

I do not want Bader & Sons Co. to receive JDLINK alert codes from my equipment.

Customer: _____ Signature: _____ Date: _____
